

Multifactor Authentication (MFA)

The cyber risk environment is everchanging and it is critical to have proper cyber security and suitable coverage to protect your insureds. With exponentially increasing claims — including those stemming from ransomware attacks — cyber underwriters continue to require minimum security subjectivities before offering insurance coverage.

Synapse has a Unique Solution to Help Protect Against Cyber Risks

Multifactor Authentication (MFA) is a security technology that requires multiple methods of authentication such as independent categories of credentials to verify a user's identity for a login or other transaction. MFA is vital to lowering the risk of a successful ransomware attack. Microsoft in 2022 stated **"MFA can block over 99.9 percent of account compromise attacks."**

Synapse Specialty has partnered with leading cybersecurity specialist Optistar Technology Consultants to offer your cyber clients MFA implementation for Office 365 or G Suite.

This service is available to all Synapse Specialty cyber clients and includes:

- Initial Setup of MFA using DUO
- Initial policies configured
- Client admin access to their own DUO portal
- Instructions and training for end user base
- Report of activations

The cost of this service is included in premiums paid by the insured.

ASSUMPTIONS:

- Insured must use Office 365 or G-Suite.
- Optistar will need Global Admin Access to Office 365 or G-suite for initial setup.
- End users will be required to use Duo Mobile smart phone app.
- Client will be responsible for future policy changes after delivery of default MFA policy.
- Insured will be responsible for the ongoing MFA DUO license fee.
- Additional cyber security offerings available at the insured's expense.
